PROFESSIONAL SUMMARY

Software engineering student with strong foundations in data structures, backend development, and AI-powered web applications. Experienced in building RESTful services using Java and Python, optimizing performance, and deploying applications with Docker in Linux environments. Passionate about scalable system design and problem-solving.

EDUCATION

MIT Arts, Commerce, Science College, Pune BCA CGPA - 8.79	2026
Central Academy School, Udaipur 12th Percentage - 75.4%	2023
Saifee Senior Secondary School, Udaipur 10th Percentage - 74%	2021

SKILLS & TECHNICAL TOOLS

Programming Languages: Python, **Java**, JavaScript, **TypeScript**, C, C++
Database: MySQL, SQLite, **PostgreSQL**
Frontend: HTML, CSS, React, **Angular**
Backend & Frameworks: Flask, REST APIs, Django, **Spring Boot**, **Hibernate**, **JPA**
Tools & Libraries: **Docker**, Git, Maven, Linux
AI/ML: PyTorch, Hugging Face Transformers, **Gen AI**

INTERNSHIP

Java Full Stack Developer Intern @ Brandspark Technologies	Jan 2026 – Present
- Developing and testing RESTful backend services using Java and Spring Boot, improving API reliability and request handling. - Implementing data persistence using JPA/Hibernate with PostgreSQL, designing efficient entity relationships and queries. - Building responsive and dynamic front-end applications using Angular and TypeScript as part of full-stack development. Working as a full-stack developer, integrating front-end and back-end components to deliver scalable and maintainable solutions. - Containerized applications using Docker and configured Linux-based development environments. - Collaborated via Git for version control, feature integration, and code reviews. - Assisted in debugging, refactoring, and optimizing legacy code to improve maintainability and performance.	

PROJECTS

YouTube Video Summarizer Python, Flask, HTML, CSS, Hugging Face, Torch	Github
- Built a web application to transcribe and summarize YouTube videos using speech recognition and transformer models. - Integrated Hugging Face models for accurate transcription and contextual summarization. - Optimized audio extraction and preprocessing using yt_dlp and Pydub, reducing processing time by ~70%. - Designed a responsive frontend for streamlined user interaction.	
Heritage and Culture Website Python, Django, HTML, CSS, JavaScript, API	Github
- Developed a full-stack Django web platform showcasing state-wise monuments, festivals, and cultural heritage. - Built an e-commerce module connecting local artisans with users. - Implemented GPS-based smart ticketing and an AI-powered trip planner for personalized itineraries. - Designed REST-based backend architecture for modular scalability.
